## Virgin Atlantic VSbulletin 024 - Inventory update

We need to let you know of changes to our flying programme which are the result of an industry-wide shortage of the Rolls Royce engines we use on our Boeing 787 Dreamliners. We've had to temporarily park some aircraft of this type but we've been working hard to ensure we still honor our passengers' travel plans.

We're continuing to work with Rolls Royce to source replacement engines as soon as possible, but in the interim we'll be proactively introducing other plans to make sure our customers can travel with certainty and in comfort. As part of this plan, we aim to lease additional aircraft into our fleet. These will be Virgin Atlantic aircraft, operated by our pilots and managed by our world class cabin crew. This will ensure our customers continue to receive the service and experience they know and love us for.

This has led to some changes in our available inventory and as a result, on a small number of services it will not be possible to book Premium Economy seats.

We're currently working on exactly what our flying programme will look like so we can't give specific route and date details at this point, but you may currently find less Premium Economy availability on some of our flights. As soon as we have final clarity over the dates and routes we will share this information with you.
